WHO WE ARE?

MULTIPROJEKT is a company that covers a comprehensive range of infrastructure for newly built or expanded logistics, industrial, road, etc. facilities. The leading domains of the company's activity are earthworks, roadworks, external networks, technological and fire networks, and above-ground and underground retention tanks, as well as design for the needs of the implementation. In the case of applications, we propose adaptation and optimization of design updates, which affects the reduction of design costs - measurable benefits for our Clients. MULTIPROJEKT is a group of creative construction engineers with extensive professional experience and passion.

OUR CREW

As MULTIPROJEKT, we employ a group of ten qualified engineers with construction licenses to carry out works without restrictions in the following specialties:

- *road,*
- *construction,*
- *installation,*

and construction licenses to design in the following specialties:

- *road,*
- *construction.*

In order to be a fully independent construction unit, we also employ a geotechnician and a qualified surveyor. In addition to the management staff, our team is complemented by qualified physical workers and operators of heavy construction equipment, mostly supported by GPS and tachymetric systems. In total, our team currently consists of 43 employees.

OUR MACHINERY PARK

The Multiprojekt company has its own construction equipment, which in most cases ensures self-sufficiency. Our machinery park includes both heavy equipment such as:

- *Bulldozers,*
- *Wheel excavators,*
- *Crawler excavators,*
- *Rollers,*
- *Dump trucks,*
- *Loaders*

as well as equipment for specialist work such as:

- *PE pipe welders,*
- *Welding machines,*
- *Pipe lasers,*
- *Surveying equipment,*
- *Formwork walls for deep excavations,*
- *Pump sets for soil drainage,*
- *Specialist health and safety equipment.*

Our construction equipment is mostly supported by GPS and tachymetric systems from leading companies such as Leica and Trimble

WHAT WE DO

We execute comprehensive Civil engineering from design to construction. The scope of our services includes:

- Roadworks,
- Earthworks
- Soil stabilization and reinforcement,
- Substructures for roads and industrial floors,
- Concrete and Bituminous pavements,
- External sanitary installations,
- External drain water installations,
- External technological installations,
- Gas installations,
- Fire installations,
- External retention tanks,
- Development of green areas,
- Design of road systems with accompanying infrastructure,
- Adaptation and optimization of construction designs to the needs of the investor and budget,
- Geotechnical and Geodetic survey services.
